Improving Bespoke's Customer Satisfaction

A data-driven intervention strategy to convert artisan satisfaction into compounding marketplace growth

Stella Lee, Alexander Warmus, Kevin Flannery

Bespoke's Value is Tied to Customer Satisfaction

Bespoke is an online two-sided marketplace connecting local artisans and small businesses to customers seeking customized, unique products. To grow as a platform, increasing the perceived value for both Buyers and Artisans is essential.

High Satisfaction Rates Drive Long-Term Competitive Positioning

Differentiation and provided value is driven not only by connecting the two parties, but by ensuring customers will enjoy their purchase.

Improving satisfaction attracts new customers and improves retention, increasing transaction volume.

Value of Positive Network Externalities:

The value of joining Bespoke marketplace increases as more users adapt the platform.

- Usage externality
- Membership externality
- Cross-side externality

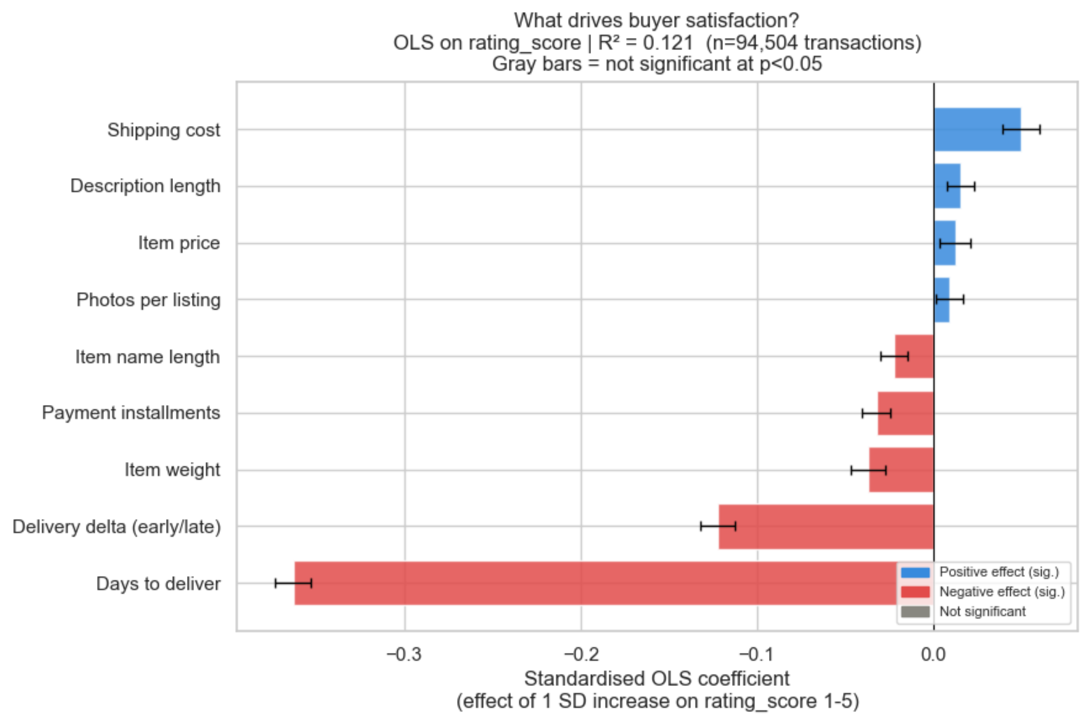
Artisan Segmentation: the "Danger Zone" (DZ)

- Low satisfaction x high revenue
- 18 % of Artisans
- Contribute 32% of total GMV
- Generate 49% of 1-star reviews
- No significant difference in product listing behaviors (photos and description length)

BUSINESS OBJECTIVE

Increase positive network externalities for Bespoke by identifying ways to increase Buyer satisfaction.

Predictors of Buyer Satisfaction



Satisfaction x Revenue Correlation

- r = -0.022
- the platform has no natural self-correcting mechanism where poor quality gets penalized through lost revenue

Top 3 Satisfaction Drivers

- Days to Deliver
- Delivery Delta
- Shipping Cost

Late delivery is the biggest driver of low satisfaction.

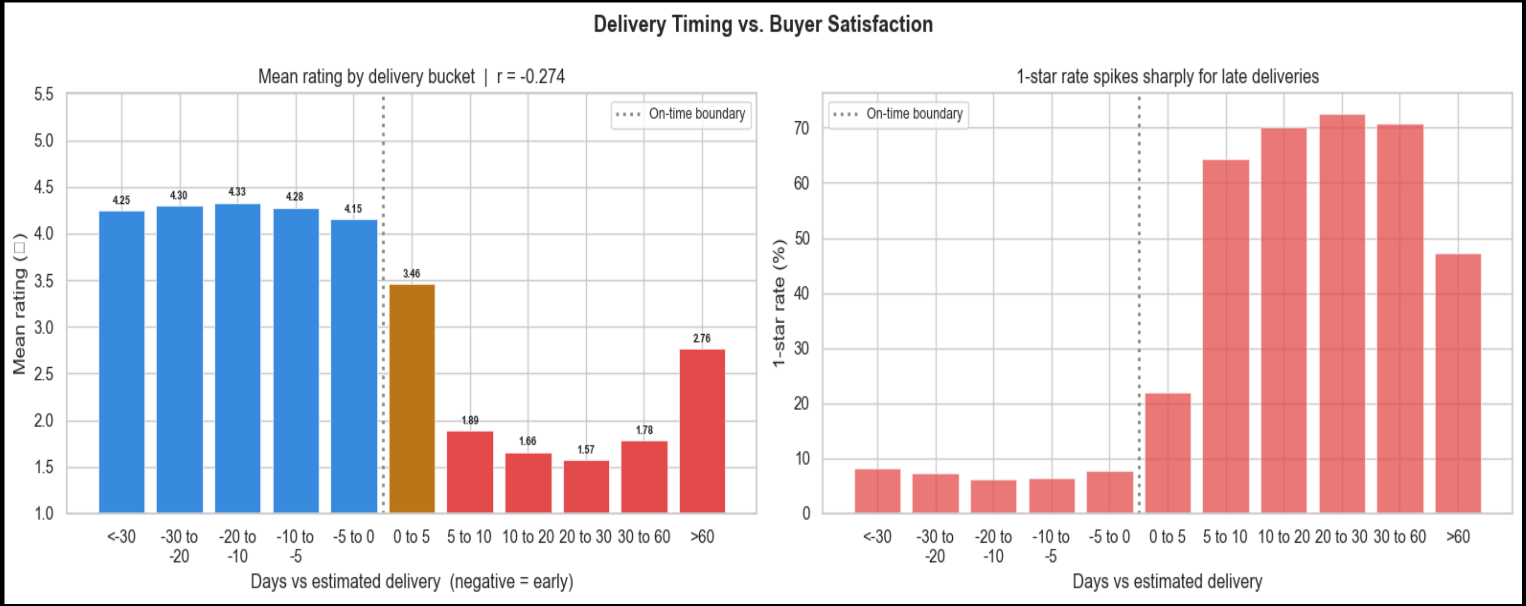
Rating Pattern Change

On-time orders average 4.2 stars
Orders just 5–10 days late average 1.9

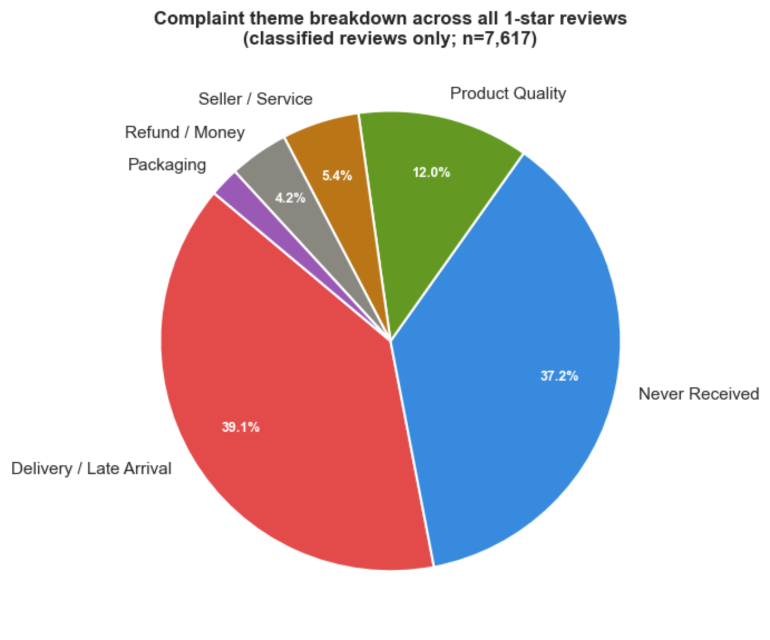
4.2 → 1.9★

Rating drops when delivery is late

On-time or early orders average 4.2 stars
Orders just 5–10 days late average 1.9 stars



Delivery Miscoordination



76%

Of 1-star reviews are delivery complaints

57%

Of late deliveries are artisan-caused (slow to ship)

Adjust delivery expectations using data. Streamline delivery timelines for both the artisan and carrier.

Three Engagements to Drive Satisfaction

1) Adjust Delivery Expectations

- Historical sellers: use 3rd quartile for time to ship in delivery time estimation
- New sellers: use generous window calculated from artisan input and product category

2) Incentivize Sellers to Ship Quickly

- Provide a verified status that increases exposure to shoppers
- Criteria: average shipping time < 3 business days and rating > 4★

3) Reduce Carrier-Driven Delivery Complaints

- Audit complaint reasons by carrier and region to identify whether issues stem from delivery speed, consistency, or rough handling
- Provide targeted alternatives by carrier and region, or adjust the seller workflow if tied to handling
